

WRA 110 – Writing: Science and Technology

Lived Experiences Project

For your first major assignment in this course, you will create a narrative detailing how a specific piece of technology has impacted your choice of a major/career at the present time. You will present this narrative in two forms: an electronic written document and a version for the web.

In order to complete this report you will need to:

- Identify an academic and/or professional career track for yourself.
- Identify and describe one piece of technology that has led you to your chosen field:
i.e. If a student is a computer science major, their interest in computers may have been piqued by experiences with their first personal computer or video game system. Or, perhaps, a pre-med student may have developed an interest in medicine through a medical device required by their own personal medical history.
- Describe in detail the experiences with technology that relate to your chosen major or field.

Your finished narrative should:

- Be at least 1,200 words in length
- Include a description of your chosen academic/career path, a description of your technical object, and depictions of relevant personal experiences linking your technical object to your academic/career path.
- Be presented as both a written document as well as a web page/site.
